Examples for 3.3
Normal (Gaussian) Distribution.

$$
\begin{aligned}
& \boldsymbol{\mu} \text { - mean } \\
& \boldsymbol{\sigma} \text { - standard } \\
& \text { deviation }
\end{aligned}
$$

$$
\mathbf{N}\left(\mu, \sigma^{2}\right)
$$

$$
\begin{array}{r}
f(x)=\frac{1}{\sqrt{2 \pi} \sigma} e^{-(x-\mu)^{2} / 2 \sigma^{2}} \\
-\infty<x<\infty
\end{array}
$$

Standard Normal Distribution.

mean
0
standard deviation 1
$\mathrm{N}(0,1)$

## Example:

For the standard normal distribution, find the area to the left of

$$
Z=1.24
$$

1.24

Area to the left
of $Z=1.24$
is 0.8925 .

$$
\begin{gathered}
\mathrm{Z} \sim \mathrm{~N}(0,1) \\
\mathrm{X} \sim \mathrm{~N}\left(\mu, \sigma^{2}\right)
\end{gathered}
$$

$$
\mathrm{Z}=\frac{\mathrm{X}-\mu}{\sigma}
$$

$$
X=\mu+\sigma Z
$$

1. At Initech , the salaries of the employees are normally distributed with mean $\mu=\$ 36,000$ and standard deviation $\sigma=\$ 5,000$.
a) Mr. Smith is paid $\$ 42,000$. What proportion of the employees of Initech are paid less that Mr. Smith?
b) What proportion of the employees have their salaries over $\$ 40,000$ ?
c) Suppose 10 Initech employees are randomly and independently selected. What is the probability that 3 of them have their salaries over $\$ 40,000$ ?
d) What proportion of the employees have their salaries between $\$ 30,000$ and $\$ 40,000$ ?
e) Mrs. Jones claims that her salary is high enough to just put her among the highest paid $15 \%$ of all employees working at Initech. Find her salary.
f) Ms. Green claims that her salary is so low that $90 \%$ of the employees make more than she does. Find her salary.
2. Suppose that the lifetime of Outlast batteries is normally distributed with mean $\mu=240$ hours and unknown standard deviation. Suppose also that $20 \%$ of the batteries last less than 219 hours. Find the standard deviation of the distribution of the lifetimes.

Let $X$ be normally distributed with mean $\mu$ and standard deviation $\sigma$. Then the moment-generating function of X is

$$
\mathrm{M}_{\mathrm{X}}(t)=e^{\mu t+\sigma^{2} t^{2} / 2}
$$

Let $\mathrm{Y}=a \mathrm{X}+b$. Then $\mathrm{M}_{\mathrm{Y}}(t)=e^{b t} \mathrm{M}_{\mathrm{X}}(a t)$.
Therefore, Y is normally distributed with mean $a \mu+b$ and variance $a^{2} \sigma^{2}$ (standard deviation $|a| \sigma$ ).

1. (continued)
g) All Initech employees receive a memo instructing them to put away $4 \%$ of their salaries plus $\$ 100$ per month ( $\$ 1,200$ per year ) in a special savings account to supplement Social Security. What proportion of the employees would put away more than $\$ 3,000$ per year?
