**Examples for 8.1 (Part 1)** 

## Hypotheses Testing for the population mean $\mu$

- 1. The overall standard deviation of the diameters of the ball bearings is  $\sigma = 0.005$  mm. The overall mean diameter of the ball bearings must be 4.300 mm. A sample of 81 ball bearings had a sample mean diameter of 4.299 mm. Is there a reason to believe that the actual overall mean diameter of the ball bearings is not 4.300 mm?
- a) Perform the appropriate test using a 10% level of significance.

Claim:

\_

 $H_0$ : vs.  $H_1$ :

Decision:	Decision:
Confidence Interval:	Decision:

b) State your decision (Accept H<sub>0</sub> or Reject H<sub>0</sub>) for the significance level  $\alpha = 0.05$ .

- 2. A trucking firm believes that its mean weekly loss due to damaged shipments is at most \$1800. Half a year (26 weeks) of operation shows a sample mean weekly loss of \$1921.54 with a sample standard deviation of \$249.39.
- a) Perform the appropriate test. Use the significance level  $\alpha = 0.10$ .

Claim:

 $H_0$ : vs.  $H_1$ :

Test Statistic:

Rejection Region:	P-value:
Decision:	Decision:

b) State your decision (Accept H<sub>0</sub> or Reject H<sub>0</sub>) for the significance level  $\alpha = 0.05$ .

r	<i>t</i> 0.40	<b>t</b> 0.25	<b>t</b> 0.20	<b>t</b> 0.15	<b>t</b> 0.10	<b>t</b> 0.05	<b>t</b> 0.025	<i>t</i> 0.02	<b>t</b> 0.01	<b>t</b> 0.005

## The t Distribution

**3.** *Metaltech Industries* manufactures carbide drill tips used in drilling oil wells. The life of a carbide drill tip is measured by how many feet can be drilled before the tip wears out. *Metaltech* claims that under typical drilling conditions, the life of a carbide tip follows a normal distribution with mean of at least 32 feet. Suppose some customers disagree with *Metaltech*'s claims and argue that *Metaltech* is overstating the mean (i.e. the mean is actually less than 32). *Metaltech* agrees to examine a random sample of 25 carbide tips to test its claim against the customers' claim. If the *Metaltech*'s claim is rejected, *Metaltech* has agreed to give customers a price rebate on past purchases. Suppose *Metaltech* decided to use a 5% level of significance and the observed sample mean is 30.5 feet with the sample variance 16 feet<sup>2</sup>. Perform the appropriate test.
